Product Details

A12.0911-B

A12.0911-T

Based on advanced optical and mechanical technology, A12.0911 is specially designed for teaching, lab and clinical diagnosis. With excellent optical system and complete accessories, A12.0911 supports for bright/dark field, phase contrast, fluorescence, presents clear micro image. Integrated with intellectualized design, such as adjustable color temperature, A12.0911 creates an easy and efficient work experience.

Engineering Structure With Practicality And Aesthetic

The double - layer mechanical stage of A12.0911 adopts line rail for overload protection at the end of x axis, and avoids the potential hazard caused by moving rack.

Cool Or Warm, Choose You Want

Most samples is suitable to be observed under natural white light, some water white samples should adopts warm color for outline and detail check. Unnecessary to add filters or change light source, color temperature range from 3000K to 5600K, A12.0911 is able to meet different demands for best image.

Intelligent Illumination System

A12.0911 with code nosepiece is able to automatically remember the light intensity of each objective which you are used to, helps to improve the work efficiency and decrease the visual fatigue. LCD beside the frame shows color temperature and light intensity, as well as the objective magnification you are using, is helpful to make record of experiment condition.

LED Fluorescence attachment

Built-In Multi-Functional Digital Camera

4.0 mega pixels CMOS camera, presents high definition image, supports for multi signal output (HDMI/USB/WIFI), with noninterference, is easy for image capture and store.
