DESCRIPTION:

The FCT162511T 16-bit registered/latched transceiver with parity is built using advanced dual metal CMOS technology. This high-speed, low-power transceiver combines D-type latches and D-type flip-flops to allow data flow in transparent, latched, or clocked modes. The device has a parity generator/checker in the A-to-B direction and a parity checker in the B-to-A direction. Error checking is done at the byte level with separate parity bits for each byte. Separate error flags exits for each direction with a single error flag indicating an error for either byte in the A-to-B direction and a second error flag indicating an error for either byte in the B-to-A direction. The parity error flags are open drain outputs which can be tied together and/or tied with flags from other devices to form a single error flag or interrupt. The parity error flags are enabled by the $\overline{OE}_{xx}$ control pins allowing the designer to disable the error flag during combinational transitions.

The control pins LEAB, CLKAB, and $\overline{OEAB}$ control operation in the A-to-B direction while LEBA, CLKBA, and $\overline{OEBA}$ control the B-to-A direction. $\overline{GEN}/CHK$ is only for the selection of A-to-B operation. The B-to-A direction is always in checking mode. The ODD/EVEN select is common between the two directions. Except for the ODD/EVEN control, independent operation can be achieved between the two directions by using the corresponding control lines.

PIN DESCRIPTION

Pin Names	Description
OEAB	A-to-B Output Enable Input (Active LOW)
OEBA	B-to-A Output Enable Input (Active LOW)
LEAB	A-to-B Latch Enable Input
LEBA	B-to-A Latch Enable Input
CLKAB	A-to-B Clock Input
CLKBA	B-to-A Clock Input
A _x	A-to-B Data Inputs or B-to-A 3-State Outputs
B _x	B-to-A Data Inputs or A-to-B 3-State Outputs
PERA	Parity Error (Open Drain) on A Outputs
PERB	Parity Error (Open Drain) on B Outputs
PA _x ⁽¹⁾	A-to-B Parity Input, B-to-A Parity Output
PB _x	B-to-A Parity Input, A-to-B Parity Output
ODD/EVEN	Parity Mode Selection Input
GEN/CHK	A to B Port Generate or Check Mode Input

NOTE:

- The PA_x pin input is internally disabled during parity generation. This means that when generating parity in the A to B direction there is no need to add a pull up resistor to guarantee state. The pin will still function properly as the parity output for the B to A direction.

3. Output level before the indicated steady-state input conditions were established, provided that CLKAB was HIGH before LEAB went LOW.
4. H = HIGH Voltage Level
L = LOW Voltage Level

0, 2, 4, 6 or 8	L	H ⁽⁶⁾
0, 2, 4, 6 or 8	H	L

NOTES:

1. Conditions shown are for $\overline{GEN}/CHK = H$, $\overline{OEAB} = L$, $\overline{OEBA} = H$.
2. A-to-B parity checking is shown. B-to-A parity checking is similar but uses $\overline{OEBA} = L$, $\overline{OEAB} = H$ and errors will be indicated on $\overline{PERA}$.
3. In parity checking mode the parity bits will be transmitted unchanged along with the corresponding data regardless of parity errors (PB1 = PA1).
4. The response shown is for LEAB = H. If LEAB = L then CLKAB will control as an edge triggered clock.
5. Conditions shown are for the byte A0–A7 and PA1. The byte A8–A15 and PA2 is similar.
6. The parity error flag $\overline{PERB}$ is a combined flag for both bytes A0–A7 and A8–A15. If a parity error occurs on either byte $\overline{PERB}$ will go low. $\overline{PERB}$ is an open drain output which must be externally pulled up to achieve a logic HIGH.

FUNCTION TABLE (PARITY GENERATION) (1, 2, 3, 4, 5)

NOTES:

1. Conditions shown are for $\overline{GEN}/CHK = L$, $\overline{OEAB} = L$, $\overline{OEBA} = H$.
2. A-to-B parity checking is shown. B-to-A is capable of parity checking while A-to-B is performing generation. B-to-A will not generate parity.
3. The response shown is for LEAB = H. If LEAB = L then CLKAB will control as an edge triggered clock.
4. Conditions shown are for the byte A–A7. The byte A8–A15 is similar but will output the parity on PB2.
5. The error flag $\overline{PERB}$ will remain in a high state during parity generation.
